

### IA Groups: Example Sheet 3

1. Let  $G$  be a group. If  $H$  is a normal subgroup of  $G$  and  $K$  is a normal subgroup of  $H$ , is  $K$  a normal subgroup of  $G$ ?
2. Let  $K$  be a normal subgroup of index  $m$  in the group  $G$ . Show that  $g^m \in K$  for any element  $g \in G$ .
3. Let  $H$  be a subgroup of the cyclic group  $C_n$ . What is the quotient  $C_n/H$ ?  
Let  $D_{2n}$  be the group of symmetries of a regular  $n$ -gon. Show that any subgroup  $K$  of rotations is normal in  $D_{2n}$ , and identify the quotient  $D_{2n}/K$ .
4. Show that  $D_{2n}$  has two conjugacy classes of reflections if  $n$  is even, but only one if  $n$  is odd.
5. Let  $D_8$  be the dihedral group of order 8. Find the conjugacy classes of  $D_8$  and their sizes. Show that the centre  $Z$  of the group has order 2, and identify the quotient group  $D_8/Z$  of order 4.  
Repeat with the quaternion group  $Q_8$ .
6. Let  $Q$  be a plane quadrilateral. Show that its group  $G(Q)$  of symmetries has order at most 8. For which  $n$  in the set  $\{1, 2, \dots, 8\}$  is there a quadrilateral  $Q$  with  $G(Q)$  of order  $n$ ?
7. Identify the elements of  $S_4$  explicitly in its action as the group of rotations of a cube.
8. Show that the subgroup  $H$  of the group  $G$  is normal in  $G$  if and only if  $H$  is the union of some conjugacy classes of  $G$ .  
Show that the symmetric group  $S_4$  has a normal subgroup (usually denoted  $V_4$ ) of order 4.  
To which group of order 6 is the quotient group  $S_4/V_4$  isomorphic?  
Find an action of  $S_4$  giving rise to this isomorphism.
9. Suppose that the group  $G$  acts on the set  $X$ . Let  $x \in X$ , let  $y = g(x)$  for some  $g \in G$ . Show that the stabiliser  $G_y$  equals the conjugate  $gG_xg^{-1}$  of the stabiliser  $G_x$ .
10. Let  $G$  be a finite group and let  $X$  be the set of all subgroups of  $G$ . Show that  $G$  acts on  $X$  by  $g : H \mapsto gHg^{-1}$  for  $g \in G$  and  $H \in X$ , where  $gHg^{-1} = \{ghg^{-1} : h \in H\}$ . Show that the orbit containing  $H$  in this action of  $G$  has size at most  $|G|/|H|$ . If  $H$  is a proper subgroup of  $G$ , show that there exists an element of  $G$  which is contained in no conjugate  $gHg^{-1}$  of  $H$  in  $G$ .
11. Let  $G$  a finite group of prime power order  $p^a$ , with  $a > 0$ . By considering the conjugation action of  $G$ , show that the centre  $Z$  of  $G$  is non-trivial.  
Show that any group of order  $p^2$  is abelian, and that there are up to isomorphism just two groups of that order for each prime  $p$ .
12. Find the conjugacy classes of elements in the alternating group  $A_5$ , and determine their sizes.  
Show that  $A_5$  has no non-trivial normal subgroups (so  $A_5$  is a *simple* group).  
Show that if  $H$  is a proper subgroup of index  $n$  in  $A_5$  then  $n > 4$ . [Consider the left coset action of  $A_5$  on the set of left cosets of  $H$  in  $A_5$ .]
13. Let  $G$  be a finite group of order  $p^am$ , where  $p^a$  is the highest power of the prime  $p$  dividing  $|G|$ . Let  $X$  be the set of all subsets of  $G$  of size  $p^a$ . Show that  $G$  acts on  $X$  by  $g : A \mapsto gA$  for  $g \in G$  and  $A \in X$ . Show that  $X$  has size prime to  $p$ , and deduce that there is a  $G$ -orbit  $X'$  of  $G$  on  $X$  of size prime to  $p$ . By considering the stabiliser of an element in  $X'$ , show that  $G$  has a subgroup of order  $p^a$ , a *Sylow* subgroup of  $G$ .
