Numbers and Sets (2009–10)

Example Sheet 3 of 4

- 1. Show that a number is divisible by 9 if, and only if, the sum of its digits is divisible by 9.
- **2.** The *Fibonacci numbers* F_0, F_1, F_2, \ldots are defined by: $F_0 = 0$, $F_1 = 1$ and $F_n = F_{n-1} + F_{n-2}$ for all $n \ge 2$. Is F_{2009} even or odd? Is it a multiple of 3?
- **3.** Let p be prime. Prove that if 0 < k < p then $\binom{p}{k} \equiv 0 \pmod{p}$. If you do this by using a formula for $\binom{p}{k}$ then argue correctly. Can you give a proof directly from the definition?
- 4. Solve these congruences:-
 - (i) $77x \equiv 11 \pmod{40}$,
- (ii) $12y \equiv 30 \pmod{54}$,
- (iii) $z \equiv 13 \pmod{21}$ and $3z \equiv 2 \pmod{17}$.
- 5. Show that the exponent of the prime p in the prime factorisation of n! is $\sum_{i\geq 1} \lfloor n/p^i \rfloor$, where $\lfloor x \rfloor$ denotes the integer part of x. Prove that this equals $(n-S_n)/(p-1)$, where S_n is the sum of the digits in the base p representation of n. Evaluate 1000! $\pmod{10^{249}}$.
- **6.** For which values of $n \in \mathbb{N}$ is $n^4 + 4^n$ prime?
- **7.** Evaluate $20!21^{20} \pmod{23}$ and $17^{10000} \pmod{31}$.
- **8.** By considering the n fractions $\frac{1}{n}, \frac{2}{n}, \dots, \frac{n}{n}$, or otherwise, prove that $n = \sum_{d|n} \varphi(d)$.
- **9.** An RSA encryption scheme (n,d) has modulus n=187 and coding exponent d=7. Find a suitable decoding exponent e. Check your answer by encoding the number 35 and then decoding the result.
- 10. Using the least upper bound axiom, prove that there is a real number x satisfying $x^3 = 2$.
- 11. Prove that $\sqrt{2} + \sqrt{3}$ is irrational and algebraic. Do the same for $2^{1/3} + 2^{2/3}$.
- **12.** Suppose that $x \in \mathbb{R}$ and $x^n + a_{n-1}x^{n-1} + a_{n-2}x^{n-2} + \ldots + a_0 = 0$, where $a_{n-1}, \ldots, a_0 \in \mathbb{Z}$. Prove that either x is an integer or it is irrational.
- **13.** Show that $\sqrt[100]{\sqrt{3} + \sqrt{2}} + \sqrt[100]{\sqrt{3} \sqrt{2}}$ is irrational.
- 14. Is there a positive integer n for which $n^7 77$ is a Fibonacci number?
