## Numbers and Sets (2010-11)

## **Example Sheet 4 of 4**

- 1. Define a sequence  $(x_n)_{n=1}^{\infty}$  by setting  $x_1 = 1$  and  $x_{n+1} = \frac{x_n}{1+\sqrt{x_n}}$  for all  $n \ge 1$ . Show that  $(x_n)_{n=1}^{\infty}$  converges, and determine its limit.
- **2.** Let  $(a_n)_{n=1}^{\infty}$  be a sequence of reals. Show that if  $(a_n)_{n=1}^{\infty}$  is convergent then we must have  $a_n a_{n-1} \to 0$ . If  $a_n a_{n-1} \to 0$ , must  $(a_n)_{n=1}^{\infty}$  be convergent?
- **3.** Let  $[a_n, b_n]$ ,  $n = 1, 2, \ldots$ , be closed intervals with  $[a_n, b_n] \cap [a_m, b_m] \neq \emptyset$  for all n, m. Prove that  $\bigcap_{n=1}^{\infty} [a_n, b_n] \neq \emptyset$ .
- **4.** Which of the following sequences  $(x_n)_{n=1}^{\infty}$  converge?

$$x_n = \frac{3n}{n+3}$$
  $x_n = \frac{n^{100}}{2^n}$   $x_n = \sqrt{n+1} - \sqrt{n}$   $x_n = (n!)^{1/n}$ 

**5.** Which of the following series converge?

$$\sum_{n=1}^{\infty} \frac{1}{1+n^2} \qquad \sum_{n=1}^{\infty} \frac{n!}{n^n} \qquad \sum_{n=1}^{\infty} \frac{1}{\sqrt{n^2+n}} \qquad \sum_{n=1}^{\infty}^* \frac{1}{n}$$

In the last case, the \* means omit all values of n whose decimal expansion contains a 7.

- **6.** Let  $a_n \in \mathbb{R}$  and let  $b_n = \frac{1}{n} \sum_{i=1}^n a_i$ . Show that, if  $a_n \to a$  as  $n \to \infty$ , then  $b_n \to a$  also.
- 7. Let  $\sum_{n=1}^{\infty} x_n$  be a divergent series, where  $x_n > 0$  for all n. Show that there is a divergent series  $\sum_{n=1}^{\infty} y_n$  with  $y_n > 0$  for all n, such that  $y_n/x_n \to 0$ .
- 8. A real number  $r=0\cdot d_1d_2d_3\ldots$  is called *repetitive* if its decimal expansion contains arbitrarily long blocks that are the same; that is, for every k there exist distinct m and n such that  $d_m=d_n,\ d_{m+1}=d_{n+1},\ \ldots,\ d_{m+k}=d_{n+k}$ . Prove that the square of a repetitive number is repetitive.
- **9.** Show that any collection of pairwise disjoint discs in the plane is countable. What happens if we replace 'discs' by 'circles'?
- 10. Show that the collection of all finite subsets of  $\mathbb{N}$  is countable. What goes wrong if we try to use the diagonal argument to show that it is uncountable?
- **11.** A function  $f: \mathbb{N} \to \mathbb{N}$  is *increasing* if  $f(n+1) \geq f(n)$  for all n and *decreasing* if  $f(n+1) \leq f(n)$  for all n. Is the set of increasing functions countable or uncountable? What about the set of decreasing functions?
- 12. Find an injection  $\mathbb{R}^2 \to \mathbb{R}$ . Is there an injection from the set of all real sequences to  $\mathbb{R}$ ?
- 13. If  $\sum_{n=1}^{\infty} x_n$  is a convergent series of reals, must  $\sum_{n=1}^{\infty} x_n^3$  be convergent?
- **14.** Is there an uncountable family  $S \subset \mathcal{P}\mathbb{N}$  such that  $A \cap B$  is finite for all distinct  $A, B \in S$ ?
- **15.** Is there an enumeration of  $\mathbb{Q}$  as  $q_1, q_2, q_3, \ldots$  such that  $\sum (q_n q_{n+1})^2$  converges?
