Bases, dimension, direct sums

Thm (Steinitz Exchange Lemma) V a finite dimensional vector space over F . let $(v_1, \dots, v_m)$ linearly independent ($\equiv$ free family), and $(w_1, \dots, w_n)$ spans V . Then:

- (i) $m \leq n$
- (ii) up to reordering, $(v_1, \dots, v_m, w_{m+1}, \dots, w_n)$ spans V .

Cor (Dimension) V be a finite dimensional vector space over F , then: any two basis of V have the same number of vectors called the

dimension of V $\dim_F V$

proof $(v_1, \dots, v_n), (w_1, \dots, w_m)$ basis of V over F . Then:

$(v_i)_{1 \leq i \leq n}$ free, $(w_i)_{1 \leq i \leq m}$ generating

$$\Rightarrow n \leq m$$

$(w_i)_{1 \leq i \leq m}$ free, $(v_i)_{1 \leq i \leq n}$ —

$$\Rightarrow m \leq n$$

□

Cor let V be an F vector space with finite dimension n . Then:

(i) any independent set of vectors has at most n elements, with equality iff it is a basis

(ii) any spanning set of vectors has at least

n elements, with equality iff it is a basis.

proof $\leadsto$ exercise.

Prop

Let U, W be subspaces of V .

If U and W are finite dimensional,
then so is $U+W$ and:

$$\dim(U+W) = \dim U + \dim W - \dim(U \cap W).$$

proof

Pick a basis $v_1, \dots, v_r$ of $U \cap W$.
Extend to a basis:

$$\left| \begin{array}{l} v_1, \dots, v_r, u_1, \dots, u_m \text{ of } U \\ v_1, \dots, v_r, w_1, \dots, w_n \text{ of } W \end{array} \right.$$

Claim $(v_1, \dots, v_\ell, u_1, \dots, u_m, w_1, \dots, w_n)$ is a basis of $U+W$.

- generating family of $U+W$: obvious.
- free family (linearly independent).

$$\sum_{i=1}^{\ell} \alpha_i v_i + \sum_{i=1}^m \beta_i u_i + \sum_{i=1}^n \gamma_i w_i = 0$$

$$\Rightarrow \underbrace{\sum_{i=1}^{\ell} \alpha_i v_i + \sum_{i=1}^m \beta_i u_i}_{\in U} = - \underbrace{\sum_{i=1}^n \gamma_i w_i}_{\in W} \quad (*)$$

$$\Rightarrow \sum_{i=1}^n \gamma_i w_i \in U \cap W \Rightarrow \sum_{i=1}^{\ell} \delta_i v_i = \sum_{i=1}^n \gamma_i w_i$$

$(v_1, \dots, v_\ell)$ basis of $U \cap W$

$$\Rightarrow \sum_{i=1}^{\ell} (\alpha_i - \delta_i) v_i + \sum_{i=1}^m \beta_i u_i = 0$$

$\Rightarrow$

$$\alpha_i = \delta_i, \quad \beta_i = 0$$

$(v_1, \dots, v_\ell, u_1, \dots, u_m)$ free

$$\Rightarrow \sum_{i=1}^p d_i v_i + \sum_{i=1}^n \gamma_i w_i = 0$$

$(v_1, \dots, v_p, w_1, \dots, w_n)$ free

$$\Rightarrow d_i = \gamma_i = 0 \Rightarrow d_i = \beta_i = \gamma_i = 0$$

Prop

If V is a finite dimensional vector space over F and $U \leq V$ (subspace) then U and V/U are also finite dimensional and:

$$\dim V = \dim U + \dim V/U$$

proof

Let $(v_1, \dots, v_p)$ be a basis of U , extend it to a basis:

$(v_1, \dots, v_p, w_{p+1}, \dots, w_n)$ of V .

Claim $(w_{p+1} + U, \dots, w_n + U)$ basis of V/U . ← Exercise

Prop V vector space over F
 $| U \leq V$

We say that U is a proper subspace if $U \neq V$.

Then: U proper $\Rightarrow \dim U < \dim V$.

$$\left(\begin{aligned} V/U \neq \{0\} &\Rightarrow \dim V/U > 0 \\ &\Rightarrow \dim U < \dim V. \end{aligned} \right)$$

Def

(Direct sum)

V vector space over F .

$| U, W \leq V$ (subspaces)

We say that: $V = U \oplus W$

("V is the direct sum of U and W")

iff every element $v \in V$ can be written:

$$v = u + w \quad \text{with } (u, w) \in U \times W$$

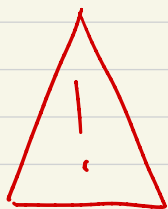

and this decomposition is unique.

Equivalently:

$$V = U \oplus W$$

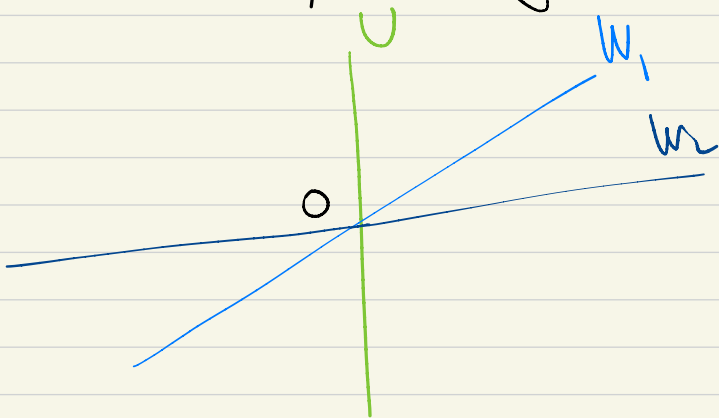

$$\Leftrightarrow \forall v \in V, \exists! (u, w) \in U \times W \quad /$$

$$v = u + w.$$

We say that W is a direct

Complement of U in V . There is no uniqueness of such a complement.

$$V = \mathbb{R}^2$$

$$V = U \oplus W_1$$

$$V = U \oplus W_2$$

Lemma

$U, W \leq V$, then:

The Following Are Equivalent:

(i) $V = U \oplus W$

(ii) $V = U + W$ and $U \cap W = \{0\}$.

(iii) For any basis B_1 of U , B_2 of W ,
the union $B = B_1 \cup B_2$ is a basis of V

proof

(ii) $\Rightarrow$ (i) $V = U + W \Rightarrow$

$\forall v \in V, \exists (u, w) \in U \times W / v = u + w.$

Uniqueness $u_1 + w_1 = u_2 + w_2 = v$

$\Rightarrow \underbrace{u_1 - u_2}_{\in U} = \underbrace{w_2 - w_1}_{\in W}$

$\Rightarrow u_1 = u_2 \text{ and } w_1 = w_2,$

$U \cap W = \{0\}$

(i) $\Rightarrow$ (iii) $\mathcal{B}_1$ basis of U

$\mathcal{B}_2$ — W

$$\mathcal{B} = \mathcal{B}_1 \cup \mathcal{B}_2$$

• generating family of $U+W$ obvious

• $\mathcal{B}$ free family: $\sum \lambda_i v_i = 0 = 0_U + 0_W$

$$\underbrace{\sum_{u \in \mathcal{B}_1} \lambda_u u}_U + \underbrace{\sum_{w \in \mathcal{B}_2} \lambda_w w}_W = 0$$

$$\Rightarrow \underbrace{0_U + 0_W = 0}_{\substack{\in U \quad \in W \\ + \text{ uniqueness}}} = \underbrace{\sum_{u \in \mathcal{B}_1} \lambda_u u}_{\text{basis}} = \underbrace{\sum_{w \in \mathcal{B}_2} \lambda_w w}_{\text{basis}} = 0$$

$$\Rightarrow \lambda_u = 0, \lambda_w = 0$$

$\mathcal{B}_1$ basis

$\mathcal{B}_2$ basis

$\Rightarrow \mathcal{B}$ free family.

(iii) $\Rightarrow$ (ii) I need to show that:

$$\begin{aligned} V &= U + W \\ U \cap W &= \{0\} \end{aligned}$$

$\mathcal{B}_1$ basis of U
 $\mathcal{B}_2$ basis of W $\mid \Rightarrow \mathcal{B} = \mathcal{B}_1 \cup \mathcal{B}_2$ basis of V .

$$\Rightarrow v \in V, v = \underbrace{\sum_{u \in \mathcal{B}_1} \lambda_u u}_{\in U} + \underbrace{\sum_{w \in \mathcal{B}_2} \lambda_w w}_{\in W}$$

$$\Rightarrow V = U + W.$$

Let $v \in U \cap W$, then:

$$v = \sum_{u \in \mathcal{B}_1} \lambda_u u = \sum_{w \in \mathcal{B}_2} \lambda_w w$$

$$\Rightarrow \sum_{u \in \mathcal{B}_1} \lambda_u u - \sum_{w \in \mathcal{B}_2} \lambda_w w = 0$$

$$\Rightarrow \lambda_u = \lambda_w = 0$$

$\mathcal{B}_1 \cup \mathcal{B}_2$ free

Def

V vector space over F

$$V_1, \dots, V_l \leq V \quad (\text{subspaces})$$

$$(i) \quad \sum_{i=1}^l V_i = \left\{ \sigma_1 + \dots + \sigma_l, \sigma_j \in V_j, 1 \leq j \leq l \right\}$$

(ii) The sum is direct

$$\left(\sum_{i=1}^l V_i = \bigoplus_{i=1}^l V_i \right)$$

iff:

$$v_1 + \dots + v_l = v'_1 + \dots + v'_l$$

$$\Rightarrow v_1 = v'_1, \dots, v_l = v'_l$$

Equivalently: $V = \bigoplus_{i=1}^l V_i$

$$\Leftrightarrow \forall \sigma \in V, \exists ! (\sigma_1, \dots, \sigma_l) \in \prod_{i=1}^l V_i \quad /$$

$$\mathcal{V} = \sum_{i=1}^p \mathcal{V}_i.$$

D.

Exercise

TFAE :

$$(i) \quad \sum_{i=1}^p \mathcal{V}_i = \bigoplus_{i=1}^p \mathcal{V}_i \quad (\text{sum is direct})$$

$$(ii) \quad \forall i, \quad \mathcal{V}_i \cap \left(\sum_{j \neq i} \mathcal{V}_j \right) = \{0\}$$

(iii) For any basis $\mathcal{B}_i$ of $\mathcal{V}_i$, $\mathcal{B} = \bigcup_{i=1}^p \mathcal{B}_i$ is a basis of $\sum_{i=1}^p \mathcal{V}_i$.
